

Successfully compiled and working rockbox firmware on agptek rocker.  
Here are the files necessary

1. rockbox.zip

<https://drive.google.com/file/d/1LI1Xnd-JzHFih3JIkVV3RRnhg62dY5zX/view>

2. update\_rb.upt

<https://drive.google.com/file/d/1wKUaxM4Zxs2850x5jeVBLI4DvbtbQTCJ/view>

#### Instructions for install:

1. Extract the folder out of rockbox.zip Take the folder out of that named ".rockbox" and put it directly into your sd card.
2. Put update\_rb.upt directly into sd card as well, and once in there, rename it to update.upt
3. Next you'll need to choose the update firmware option in agptek rocker settings.

It should upgrade and then you'll have a choice to choose rockbox, the original agptek rocker os and some tools.

Hope this helps, leave a reply if you need help with the install.
