----- AC02BE Mini Lapel Microphone

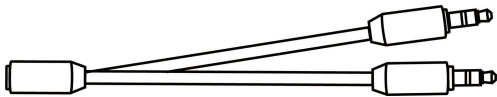

## Package includes:

Earphone microphone  
(CITA standard)

3.5 mm straight metal  
adapter (OMTP standard)

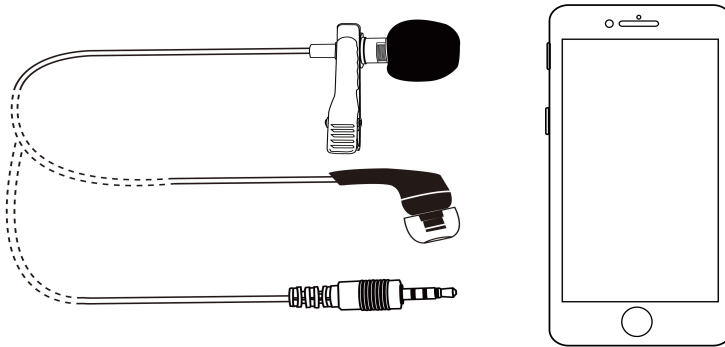

3.5 mm 2-in-1 adapter

## Why should I use the adapter?

Where you connect a microphone to a computer or a mobile phone depends on the connector the microphone utilizes, so sometimes you will need an adapter or connector to help you. Generally speaking, this earphone microphone with 2 adapters can connect to nearly any machines such as Apple devices, Android devices, voice recorder, voice amplifier, desktops, laptop, tablet, Mac, video camera and so on.

## How do I know if I should use the adapter or not?

Directly plug the earphone microphone into your device, this applies to phones such as APPLE(All Series), XIAOMI(All Series), MEIZU(All Series), SONY(All Series), LG(All Series), SAMSUNG(Consult with after-sales service), HTC (Only for official products), Computers(With only one audio jack).

If it doesn't work, you will need one of the attached adapter to help with the connection.

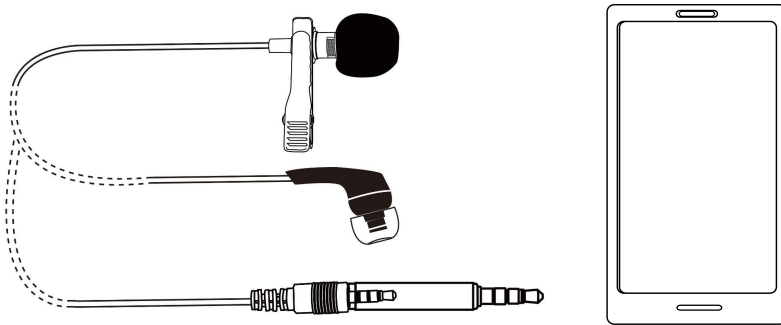

## How do I know which adapter I should use for my device?

For part of phones or computers with two audio jacks that does not compatible with the earphone microphone, you will have to use the adapter to help you.

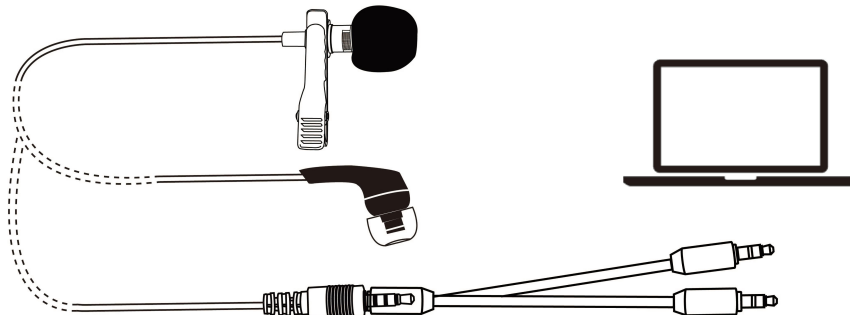

You can connect the microphone with your device by the following two ways, shown as picture:

1. Connect the straight metal adapter and the earphone microphone together, then plug the male

port of the metal adapter into the phone such as Moto(All Series), HUAWEI(All Series).

2. Connect the 3.5mm 2-in-1 adapter and the earphone microphone together, then plug the 2-in-1 adapter(with two male ports) into a computer with two audio jacks, speaker, camera and line-in recorder.

When you use it as a microphone, there will be different sound effect for different devices.

1. For iPhone smartphones and computers: you can hear your voice and accompaniment from the earphone while speaking/singing and in the replay ;

2. For Android smartphones: you can only hear your voice and accompaniment in the replay , that means you will only hear accompaniment from the earphone

when you are speaking/singing;

3. For computers: if you are singing songs with the 2-in-1 adapter, you will hear your voice and accompaniment from the earphone; but if you are chatting, you will only hear the voice on the other end (instead of yours).

Note: This 2-in-1 adapter is a whole part and the two male ports are not allowed to be separated into two parts.
