

SKP1 Instruction Manual

Padded with premium insert, AGPTEK premium patella tendon strap/ knee brace is shock absorption, compression resistance, impact resistance. It can work as a cushion right on the tendon between patella and tibial which will greatly reduce stress travelling through your knees, and also help relieve your knee of the troublesome aches and pains associated with knee conditions, lower the chances of accidental tendon injury, patellar dislocation and knee sprain during professional sports training or sports-related activities.

Application Instructions:

1. Bend your knee, place the knee brace right on the tendon between patella and tibial.
2. Open the brace by pulling apart the Velcro. Wrap the brace around the leg. Encircle your knee with the brace, then thread it through the buckle.
3. Attach the Velcro behind the knee. Walk around, adjust tension as necessary.

Precautions:

This product is only helpful to your patella, you should not use it to self-diagnosis or treat health problem or disease. If you suspect you have a medical problem, contact your health-care provider immediately.
